# Methodology

The Customer Vault allows merchants to transmit their payment information through a Secure Sockets Layer (SSL) connection for storage in our Level 1 PCI certified data facility. Once the customer record has been securely transmitted to the Customer Vault, the merchant can then initiate transactions remotely without having to access cardholder information directly. This process is accomplished without the merchant storing the customer's payment information in their local database or payment application.

Furthermore, using the NetworkMerchants Browser Redirect Method in conjunction with the Customer Vault allows merchants to process transactions without transmitting any payment information through their web application. This unique approach provides best of class application flexibility without any PCI compliancy concerns. The NetworkMerchants Redirect API (Advanced Programmers Interface) is available by request of the project manager.

# **Customer Vault Types**

### add\_customer

If you pass add\_customer as argument to the customer\_vault variable, (customer\_vault=add\_customer) the payment gateway will create a secure customer record.

# update\_customer

If you pass update\_customer as argument to the customer\_vault variable, (customer\_vault=update\_customer) the payment gateway allows an update/over-ride to any information on the customer vault record; except for the customer\_vault\_id.

### delete\_customer

If you pass delete\_customer as argument to the customer\_vault variable, (customer\_vault=delete\_customer) the customer\_vault\_id is the only required field to delete a customer record.

# **Customer Vault Variables**

### add\_customer

Variable Name	Required	Format	Description
customer_vault	Required	add customer	Adds a secure customer vault record
customer vault id*	Optional*		Specifies a Customer ID*
username	Required		Username assigned to merchant account
password	Required		Password assigned to merchant account
cenumber	Required**		Credit card number
ccexp	Required**	MMYY	Credit card expiration (ie. 0705 = 7/2005)
checkname	Required**		The name on the customer's Checking Account.
checkaba	Required**		The customer's bank routing number
checkaccount	Required**		The customer's bank account number
account holder type	Required**	business / personal	The customer's type of ACH account
account type	Required**	checking / savings	The customer's type of ACH account
payment	Required**	creditcard / check	Set Payment Type to ACH or Credit Card
ordered	Optional		Order ID
orderdescription	Optional		Order description
firstname	Recommended		Cardholder's first name
lastname	Recommended		Cardholder's last name
company	Optional		Cardholder's company
addressl	Recommended		Card billing address
address2	Optional		Card billing address – line 2
city	Recommended		Card billing city
state	Recommended	CC	Card billing state (2 character abbrev.)
zip	Recommended		Card billing zip code
country	Recommended	CC (ISO-3166)	Card billing country (ie. US)
phone	Recommended	38 - 39	Billing phone number
fax	Optional		Billing fax number
email	Recommended		Billing email address
website	Optional		Website
shipping_firstname	Optional		Shipping first name
shipping_lastname	Optional		Shipping last name
shipping company	Optional		Shipping company
shipping address1	Optional		Shipping address
shipping address2	Optional		Shipping address – line 2
shipping_city	Optional		Shipping city
shipping state	Optional		Shipping state
shipping zip	Optional		Shipping zip code
shipping_country	Optional	CC (ISO-3166)	Shipping country (ie. US)

<sup>\*</sup>If you do not pass a customer vault\_id, our system will randomly generate one. If you include both customer\_id and customer\_vault\_id, they must match.

### update\_customer

Variable Name	Required	Format	Description
customer vault	Required	update customer	Updates a secure customer vault record
customer vault id	Required		Specifies a Customer Record
username	Required		Username assigned to merchant account
password	Required		Password assigned to merchant account

### delete\_customer

Variable Name	Required	Format	Description
customer_vault	Required	delete customer	Deletes a secure customer vault record
customer vault id	Required		Specifies a Customer Record
username password	Required Required		Username assigned to merchant account Password assigned to merchant account

# **Testing Information**

## **Transaction Testing Account**

Transactions can be tested using one of two methods. First, transactions can be submitted to any merchant account that is in test mode. Keep in mind that if an account is in test mode, all valid credit cards will be approved but no charges will actually be processed.

The Payment Gateway demo account can also be used for testing at any time. Please use the following username and password for testing with this account:

Username:	demo
Password:	password

# Transaction POST URL

All transactions should be submitted to the following URL:

### https://secure.planetauthorizegateway.com/api/transact.php

This URL is the same for both Live and Test Mode environments.

<sup>\*\*</sup>You can only pass Credit Card or eCheck transaction variables.

### **Test Transaction Information**

Test transactions can be submitted with the following information:

Visa	41111111111111111
MasterCard	543111111111111
DiscoverCard	6011601160116611
American Express	341111111111111
Credit Card Expiration:	10/10
Amount	> 1.00

# Examples

(Customer Vault information that will be saved is highlighted)

Process a sale using a Customer Vault record:

username=demo&password=password&amount=100.00&customer vault id=001

### Process a new sale and create a new Customer Vault record:

username=demo&password=password&amount=100.00&firstname=Joe&lastname=Smith&address1=1234 Main Street&address2=Suite200&city=Chicago&state=IL&country=US&conumber=4111111111111111&cccxp=1010&cvv=123&type=sale&customer\_vault=add\_customer&customer\_vault\_id=001

### Update a Customer Vault credit card number and expiration date:

username=demo&password=password&customer\_vault=update\_customer&customer\_vault\_id=001&ccnumber=51111111111111111111212&cceep=1012
